

eco friendly

Dear Mufti Sab,

AWW, I would like to give my suggestion on how to make the school more eco friendly! we can make the school more eco friendly by using less paper and replace the paper by doing work online, that way we are cutting down less trees and harming the environment!

I think we should stop using paper because the process of making paper can produce carbon dioxide/pollution and deforestation, if we carry on the action of deforestation then that will harm the trees which then the cause will be less oxygen!

Also if we keep on carrying on the action of deforestation then that will cause many movement of soils which then cause floods which will be very risky!!!

A typical school will use an average of 2,000 sheets per day, meaning that during a full school year of 160 days, a school will go through over 320,000 sheets of paper per year, this means that all together schools are consuming as much as 32 billion sheets of paper per year.

See how much can be done by deforestation just for a piece of paper....

Please be considerate about my suggestion.
